PROFILE

Computing Science student at the University of Alberta with internship experience developing full-stack software features within an Agile team. Skilled in front-end work (TypeScript, React.js, Next.js, HTML, CSS), SQL/NoSQL databases, and collaboration via Git. Motivated by building responsive interfaces and learning modern frameworks such as Angular. Fully bilingual in English and French, both spoken and written.

EXPERIENCE

Software Developer Intern May 2024 – September 2024
Nexfolyo (Hybrid) *Edmonton, AB*

- Developed and maintained full-stack features and front-end UI components within a 6–7 person Agile team.
- Reviewed peer code through pull requests (Git/GitHub) to ensure code quality and adherence to best practices.
- Resolved software issues and coordinated code changes through Git branch management.
- Delivered tasks against requirements reviewed weekly with a product manager, including written and verbal updates.

Teaching Assistant, CMPUT 174 (Introduction to Python) Sep 2025 – Dec 2025
University of Alberta *Edmonton, AB*

- Graded student code and clearly explained correct programming approaches to students of varying skill levels.

EDUCATION

Bachelor of Science — Computing Science Major, Business Minor Expected: July 2027
University of Alberta *Edmonton, AB*

- Relevant coursework: Introduction to Software Engineering; Web Architecture and Applications; File and Database Management; Machine Learning.
- Honours: University of Alberta International Admission Scholarship; Regional Excellence Scholarship.

PROJECTS

BeefStock — Paper-Trading Education Platform *React, TypeScript, Express, Supabase*

- Built a full-stack learning platform simulating stock trades with no financial risk, based on RSI/MACD/SMA indicators.
- Developed a RAG (Retrieval-Augmented Generation) pipeline to ground the integrated chatbot's responses in the educational content.
- Instrumented queries and built an automated evaluation harness to improve response accuracy.

SpecAQI — Hyperlocal Air Quality Tracker *Next.js, React, Tailwind CSS, Leaflet*

- Developed a full-stack web app at the HackED Hackathon to assess air quality for a specific location (park, beach) rather than a city-wide average.
- Integrated the PurpleAir API through secure server-side Next.js API routes to protect access keys.
- Estimated local air quality using the Haversine formula and inverse-distance weighting, converting raw data into an AQI index.

DarkOrchid — Team Software Application *Java, Android Studio, Firebase, JUnit*

- Applied object-oriented design to a complete application within an Agile team project, with code review via GitHub.
- Modeled Firestore data and wrote unit and UI tests with JUnit to validate functionality.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, Java, Python, C, C++, SQL, XML

Front-End & Mobile: React.js, Next.js, Bootstrap, Tailwind CSS, Vite, Flutter, Leaflet, JSON

Back-End & APIs: REST APIs, Express, Node.js, object-oriented programming

Databases: SQL, SQLite, MongoDB, Firebase (Firestore), Supabase, database design

Tools & Cloud: Git, GitHub (branches, pull requests, code review), Bitbucket, Jira, Figma, Linux

Testing & Practices: JUnit, unit testing, UI testing, Agile/Scrum, debugging, responsive interfaces

Spoken Languages: English (fluent), French (fluent)
